EDUCATION

University of Dayton

Master of Computer Science

May 2020

GPA: 3.80/4

Anna University

Bachelor of Engineering in Computer Science and Engineering

May 2017

GPA: 8.31/10

TECHNICAL SKILLS

Programming Languages: Java, C#, Python, JavaScript

Front-end: HTML5, CSS, Bootstrap

Back-end: Spring Boot, REST APIs, Node.js, Flask

Database/ORMs: MySQL, Oracle, MongoDB, Hibernate ORM

Build & Deploy: AWS Cloud, Docker containers.

Source Control: GitHub, Bitbucket

Testing Tools: Mocha, Cucumber

Data Visualization: Dash Plotly, Tableau, MS Excel

WORK EXPERIENCE

Workday – Software Application Engineer II; Atlanta, GA

Jan 2023 – Present

Workday Student (Financial Aid Cost and Awards) –

- Designed and developed features for Workday Student using Java, SOAP/RESTful web services, XML, Python, Bitbucket and WATS (Workday Automation Test System).
- Led design and development of 2 new features that facilitated data integration between Workday and third parties.
- Triaged and formulated efficient solutions, patch fixes to resolve critical customer bugs; mitigated security risks and optimized code to improve a slow-running job step by 30%.
- Upgraded features for Project CAA (College Affordability Act) to include changes pertaining to Federal loans (Direct) for Students and conducted impact analysis, peer code reviews.
- Collaborated with teams across Payroll, Compensation to put forward best initiatives for customers.
- Served as an Agility Coach, led SCRUM ceremonies and practiced Agile SDLC methodology; Tracked progress with JIRAs.

Tata Consultancy Services – Software Engineer; Dallas, TX

Aug 2020 – Dec 2022

Citi Bank (SOM) -

- Devised and implemented SOM systems for online marketing campaigns in Citibank using Java, PEGA Chordiant Decision Manager, and Oracle SQL executing ORM with Hibernate.
- Developed and tested microservices using Java, JUnit, Spring Boot, Hibernate, and RESTful services to analyze campaign performance.
- Debugged codebase to eliminate bugs, performed unit testing (JUnit), Postman to validate payload. Deployed to Nginx server with Jenkins CI/CD and imposed exception handling to log errors; enhance application's user experience.

Operating Fundamentals (OPSFUN) -

- Built dashboards to visualize data using Plotly Dash, Flask and MongoDB to project reasons for application's failures and its month-on-month progress. Styled web application with dash-bootstrap-components to develop responsive UI layouts.
- Automated data feed generation with Python Scripts to score efficiency and health of all applications hosted online for user interaction under multiple domains of banking sector.

Cognizant – Programmer Analyst; Chennai, INDIA

Nov 2017 – Jul 2018

- Created workflows in UiPath to form robust automation solutions by RPA.
- Initiated a feature to reduce delay overheads caused during automation of processes by bots.
- Collaborated with members of team and integrated enterprise applications to support automation of external interfaces.

Synapticdots Solutions Pvt Ltd – Software Engineering Intern; Chennai, INDIA

Dec 2015 – Feb 2016

- Built web applications for Registration, Login Customer interface for Retail Online Banking.
- Coded personas with JavaScript, HTML5, CSS and connected to Oracle SQL as backend.
- Delivered bug free code by executing test cases using JUnit and maintained code quality.

ACADEMIC PROJECTS

E-Commerce Application – React.js, Redux, Docker, Node.js, Express, Kubernetes and Redis

- Created an e-commerce application with Microservices Architecture by building a server-side rendered application using React and Next.js for front-end design to render data from microservices.
- Combined micro services using Node.js and Express and data for each service held in Redis data store.
- Deployed multi-service app to cloud Heroku with Docker and Kubernetes.

Project Management Application – Java, Spring Boot, Hibernate, MySQL

- Designed a web application with Thymeleaf for managers to allocate resources for a project and assign employees to same reflecting status of their project (Completed, Not Completed, In Progress) implementing REST APIs incorporating MVC design pattern.
- Integrated Lombok, Spring Web to perform CRUD operations and ensured security through JWT for authentication thereby optimizing application's performance. Connected to backend with Hibernate ORM to map data models into SQL tables.
